Oct 23, 2018 Might be a month later but here is the update. With ROM Ver 2.2, FreeMcBoot works on any SCPH-90004S or SCPH-90004 without issues. Including the USD models which have the Revision E and B Switchers. I also found that the AUS and JAPR models may work with Free McBoot with a little bit of modification. Hi I've been trying to load pictures on my flash memory into my smart stick ps2 but it wont work I've upgraded to the newest version which I havent tried this so yet please help, thanks. Oct 10, 2018 I find this question quite weird. Please make sure that the flash memory card is formatted as FAT32 if it is not

formatted as FAT32, the flash memory card will not be recognized. I suggest you to format it as FAT32 on your PC and then reformat it as FAT32 on your PS2 using A-JCPSC-PS2-USB. I am pretty sure that the solutions you find in this forum will not help, although we don't know how your PC is formatted.

Nov 6, 2018 How do I read the content of my flash memory storage which is formatted as FAT32 on my computer. I tried using e.g. UltraISO but it wouldn't read the files.

Jan 29, 2019 I have Samsung 860 EVO in U.S. region. An "1 no. card" is used in the U.S. region to indicate a non-U.S. region PS2 (which does not contain a region switch). I don't

know if this particular flash memory card is a U.S. region card or not. In any case, there is no need to use a U.S. region "1 no. card" with Free McBoot. You need to use Free McBoot with the compatible region switch. Oct 7, 2019 Yes, it will work, but you need to format the flash memory card as FAT32 on your PC. Oct 14, 2019 Hi. It does not seem to matter whether the flash memory card is formatted as FAT32 or not. If the flash memory card is not formatted as FAT32, Free McBoot will not be able to read all the files on the flash memory card. You are still able to use the flash memory card normally.
