Nov 12, 2018 Assassin's Creed Odyssey Deluxe Edition -3 DLCs, MULTi15 | Save 23GB with 1 language of repack - from 63GB to 23GB, oh Fitgirl, you did it. You delivered. This invention is in the field of wind energy. More specifically this invention relates to wind turbines and especially to wind turbines with rotor blades attached to the hub with hinges. Many of the wind turbines currently available and in the use of the wind industry are of

the horizontal axis type. A major problem with these turbines is that they have high up- and down-speed capability (revolutions per minute) but do not have high lateral speed capability. Consequently, these turbines are highly susceptible to being blown over by strong lateral winds (high or low direction winds). Additionally, the towers are weak in the lateral plane and the forces of lateral winds cause the towers to eventually collapse. The simple, clean and aesthetically pleasing design of the present invention allows the connection of the hub to the blade by a hinged joint or even a direct friction fit. This eliminates the

need for a rigid link extending across the blade and the hub. An arm allows the attachment to be accomplished by a simple press fit into the arm slot of the hub. The attachment can be accomplished by a friction fit in the arms slot or by a direct press fit into the arms slot of the hub. In either case, the connection is light weight, very strong and reduces the vulnerability of the hub to lateral wind gusts. In addition, the design of the hubs allows for very high torque loads to be transmitted by the blade through the hubs. It is an object of the present invention to provide a rotor blade attachment design that is strong

and resilient. It is a further object of the present invention to provide a rotor blade attachment design that is stable in high winds. It is a further object of the present invention to provide a rotor blade attachment design that will maintain the strength of the rotor blade in high winds. It is a further object of the present invention to provide a rotor blade attachment design that is lightweight. It is a further object of the present invention to provide a rotor blade attachment design that is aesthetically pleasing. It is a further object of the present invention to provide a rotor blade attachment design that is

cost effective. It is a further object of the present invention to provide a rotor blade attachment design that is modular and universal. It is a further object of the present invention to provide a
