**\*\*Ossification of the Posterior Longitudinal Ligament of the Spine (OPLL): Epidemiology and Pathophysiology\*\***. John M. Juel, et al. *\*Journal of the American Academy of Orthopaedic Surgeons\** 1998;3:23--29. **\*\*abstract\*\***. This article discusses the etiology and pathophysiology of ossification of the posterior longitudinal ligament (OPLL). A PubMed search was conducted for "ossification of the posterior longitudinal ligament" and the search results are tabulated. There are approximately 50 articles discussing the etiology and pathophysiology of OPLL. See, for example, Wierzbicka et al. in the preceding article, "Ossification of the Posterior Longitudinal Ligament of the Spine (OPLL): Epidemiology and Pathophysiology." **\*\*Anterior (Obtuse) Pelvic Instability (API) and the Unstable Femoral Head in Perthes Disease\*\***. Linda L. Londero, et al. *\*Orthopaedic Journal of Sports Medicine\** 2011;9: S41-S45. **\*\*abstract\*\***. This article discusses the frequency of posterior growth disturbance in children with advanced stages of Perthes disease. The authors investigated the frequency of a lateralization of the greater trochanter due to posterolateral growth plate bowing and evaluated the sensitivity and specificity of the posteroanterior radiograph to diagnose lateralization and malrotation. Twenty-five patients with stage-III or IV Perthes disease were reviewed. The authors found that the radiographic evidence of a lateralized greater trochanter was seen in 71% of children with advanced disease. The posteroanterior radiograph is not a reliable means of identifying anterior femoral insufficiency, given that all patients with a lateralized greater trochanter also had a malrotated proximal femur. Therefore, a lateralized greater trochanter is not a definitive finding, and the authors advocate the use of MRI for evaluation of growth disturbances in Perthes disease.

You are watching a video titled kamasutra pdf. And below is a text that talks about the benefits of kamasutra. It was sent by the girl to whom this video is going. The text: "Hi, my name is Tanya, I'm 23 years old, married. My husband and I have a beautiful family, we have a child. I really like sex, in bed I am always active, although I am not "topical" and not in the "hot ten" of the Kama Sutra. I am constantly experimenting, so my husband knows that I like different "experiences". We also tried threesomes as "new experiences. fffad4f19a
