

(babylon) re I am having issues with my GPU, it doesn't really do 3D at all, like it's moving the gears at the bottom of the screen, so I turned it off, now that it's off it won't load, it's just a bunch of zeros and stuff I am trying to figure out why my GPU doesn't do 3D Glorfindel: that's probably because it was overheating. yeah, that's what I thought, but it's not that old I could be way off. at least it was 1.5 years old Glorfindel: overheating is the first thing to look at, because it's usually pretty obvious, but not always. well, I'm hoping it wasn't overheating, because I got it for under \$50 Glorfindel: if you want it to run well, you'll have to use the correct drivers for it okay, well it's still off, I can still get into it Glorfindel: it's best to also have a cooling fan for that GPU, and the airflow will help. yeah, I have an air purifier, but it doesn't filter any dust, just really warm air Glorfindel: a dust filter is the first thing you want. oh I got that, I have a dust filter and it still didn't do anything Glorfindel: you could also try running a diagnostic tool on the GPU and see if it will load up. Glorfindel: also, is this a desktop PC? it's a desktop, I was thinking about putting it in a server Glorfindel: don't, do yourself a favor and put it in the best case scenario: a new computer. well, it's a core i7 Glorfind
