NET v4.5 includes many new features

and capabilities, including new processing support for large data sets in parallel. These changes make it easier to work with large data sets that may contain a large number of records. If you want to learn about the new .NET Framework, see the documentation online. For developers working with Windows Forms controls, see the development documentation in the Windows Forms Developer Center. Developers using Windows Presentation Foundation can learn about the core Windows Presentation Foundation,

including changes to how you use the controls and data binding, in the Windows Presentation Foundation Developer Center. For more information about the updated features of the .NET Framework 4.5, see [.NET Framework 4.5 Overview](#). .NET Framework 4.5 is a significant update to the .NET Framework. It includes many new features and capabilities, including new processing support for large data sets in parallel. This content outlines these new features and capabilities of .NET Framework 4.5. [New Features and](#)

Capabilities This content outlines these new features and capabilities of .NET Framework 4.5. New Features and Capabilities You can use .NET Framework 4.5 to create applications that use parallel processing to work with large data sets. You can use .NET Framework 4.5 to create applications that use parallel processing to work with large data sets. The .NET Framework 4.5 introduces the notion of and its use in the programming language that is called for the first time in .NET Framework 4.5. This language, called and previously was available in

previous versions of the framework, is a highly generic language that is used to describe a class of objects in a program. is a generic programming language that enables you to describe a class of objects in a program. is a generic programming language that enables you to describe a class of objects in a program. The .NET Framework 4.5 introduces changes to how the language is used in .NET Framework 4.5. These changes include: A new static method called `Creates` a .NET Framework 4.5 generic class with the specified parameters. This new static

method simplifies the creation of new generic types. It includes an overload that takes a string as an argument and is used to create a generic type that uses a given string as its name. called from a generic class or type. This new static method simplifies the creation of new generic types. It includes an overload that takes a string as an argument and is used to create a generic type that uses a given string as its
