Weaving Simulator, is a powerful, easy to use and free application for the design of digital patterns. It allows the user to quickly create patterns by selecting color combinations, and it provides a multiple-resolution preview function. EXPORT function in PATTERNDESIGN to export the pattern to a BMP file. An important use of this utility would be on a mobile device to allow the end-user to save the pattern and to not have to re-import it on every device. BOSS ART Description BossArt is a mod that gives you easy access to hundreds of high-res icons for tools, packages, addons, actions and backgrounds. It's a collection of high quality (1200x1200px) vector images from many different artists around the World. All you have to do to install it is to extract the contents of the archive, and run the BOSSART.bat file included with the archive. Child's Play Description Child's Play is an extension for xmplay that gives the player the ability to play games with another player, or up to three others, using the same keyboard and mouse. The client is multi-threaded, which means it can run on a multi-core machine, while still having to use a single keyboard and mouse for all players. Also, players can be in the middle of playing and the game can continue to run. Although our extensions can be installed using Mirlo, they will not run unless you have been expressly granted permission to use them. This is due to the nature of the extension. We'll only allow it to be used for our purposes, and only those purposes. Extending xmplay is a lot easier than you might think, we have had to make our own implementations of some pieces of the API, but we've avoided using the SDK. The purpose of the SDK is to make things easier on the end-user, but it creates a lot of unnecessary work for our developers. The truth is, our extensions are just too good to let people use them for their own. Blizzard Designer Description A free extension for the Blizzard game Dungeon Keeper 2. Just download it, and it lets you make dungeon layouts, characters, items, enemies and more. It includes a sample campaign, and a set of ready-made layouts. Chaos Explorer Description Chaos Explorer is an addon for the Warcraft 3 (Wc3) game client.

Get ready to weave! In Weaving Simulator, you are given a set of warp threads and a set of weft threads. You can control the speed and tension of your loom by controlling the rhythm of a set of treadles. The weaver can then cut and start knitting the fabric, and even change colors. Weave as many colors as you want! Woven weft in the horizontal or vertical direction? Weave weft into an area inside of a tile? It's up to you! The game starts with a template, which can be filled with patterns by the user, or with a set of patterns by the game. The user can then decide the style of weaving (whether it is a traditionally printed, a monochromatic, or even a print that can go in different directions at the same time), whether it's a 3D print or a flat image, whether the fabric would be on a loom or in a frame, and then whether the fabric is a scarf or a nice jacket or pair of trousers. Then the weaver will get to it, to weave the fabric according to the chosen patterns and with the chosen colors. The user must watch the design as it is woven, and can move the fabric across the loom from tile to tile or even across the whole canvas, which lets the user make the design larger or smaller. Weaving Simulator offers a bunch of fascinating features, such as controlling the speed of the loom. There are now a lot of options to play with: Stop, slow down or speed up the weaving process with the help of the huge range of props that are available in the game. Animated weft can create weaving effects in game, while the user can pick up the fabric and/or yarn from any angle. The color can be chosen too, so you will be able to weave in different shades as well as different colors. You can pick or cut the fabric at any point of the woven fabric. Weaving a piece of fabric will let you show the viewer a live preview of the fabric, with all of the color changes that have been made. Weaving Simulator Description: Introducing a game where you can create a tailored dress. You can choose fabric, choose your size, choose your body shape. Weaving Simulator is an application designed to help you create your own fabric designs. Weaving simulator consists of six parts: 1. Creating your own fabric designs Weaving simulator is designed to be used to create your own fabric designs. You can select colors, shapes and sizes by clicking on them. You can now use them to make your own weave designs. Weaving simulator Key Features: Weaving simulator enables you to create both hand and motorized weaving fabric designs. You can either create your own patterns using the tools in the left or you can import patterns designed by other people. You can switch freely between the two templates and quickly change the design parameters of a given pattern. You can easily save your designs for later use or share them via email or a local network. Weaving simulator allows you to select colors, shapes and sizes to be used in a given pattern. Weaving simulator includes a built-in UV editor that allows you to view fabric designs in different colors and view different angles of a given fabric. Weaving simulator offers a comprehensive array of design features that includes: Accessories Store: Here you can buy accessories for your weaving simulator application such as: You can configure the number of wefts, reed picks, treadles and warps in a motorized design or get access to the source code. It's time to play the game! Weave your way through this beautifully crafted game and you might even make the Guinness Book of World Records. Join us and create your own fabric design in just a few minutes. We are going to teach you how to make a digital fabric design so you can create your own cloth using real weft and warp yarns. You will be able to use the custom tools for both loom and digital designs, and you will also practice weaving with two different custom yarns. You will also be able to download the design files so you can create a three-dimensional masterpiece to use in real life and digitally. Now

What's New in the?

Nvidia's Breaking the World Record for Most Simultaneous Weaving Activities (May 2017) was a world record attempt to see how many weavers could participate in a single session. The success of the event depended on its ability to capture the weavers' experiences, and this experience is captured in NVIDIA's Weaving Simulator. Using their expertise in crafting immersive experiences, the team had created a videogame set in a space ship to explore and conquer weaving. Weaving Simulator provides users with a fabric design application that enables hand weavers to create digital patterns and preview the output before getting to work. Weaving Simulator enables the user to configure the number of treadles, warp ends, harnesses and weft picks. You can change the colors of each tile or remove tiles with a single click. FEATURES: - High resolution graphics - High-end sound - Physical feel - Digital patterns - Six different wearables - Virtual heads for viewing patterns - Customizable backgrounds - Community - High participation - High-quality results - Learning materials What's New in Version 2.1.1: • Stability and bug fixes What's New in Version 2.1: The NVIDIA Weaving Simulator continues to evolve with the latest features. The program now includes a collection of virtual head weavers, each available to view patterns created by the hand weavers in real-time. Choose between the different heads to get an improved look and feel of the patterns weaver created. Add a new set of eyes to weave, a fun and educational tool for all weavers. Weaving Simulator Demos: • Take a tour of some of the added features in the latest version. Our Weaving Simulator reviews: • Play Weaving Simulator and get a better idea of how this tool can be used.
