AutoCAD Architecture An architectural design program developed by Autodesk, a subsidiary of software company Corel Corporation, is a professional tool for drawing architectural plans and visuals. It can be run locally or remotely and on Windows, Mac OS X, Linux, and Unix platforms. AutoCAD Architecture is an Autodesk product that is licensed to the Architectural Institute of British Columbia.

AutoCAD Architecture is usually installed in the same directory as the other AutoCAD programs. Autodesk architecture can be used on either Windows or Mac OS X systems and all major operating systems support it. As of 2013, AutoCAD Architecture is no longer available for purchase and only the core edition is available. AutoCAD Architecture is still licensed for use in a limited number of schools and universities, and the program is still available for sale to individuals in those schools and universities through the Autodesk Exchange Apps store. In April 2009 Autodesk Architecture claimed the title of world's fastest structural drawing program, although not by much, with 3D web based rendering capable of 15 FPS on a 3GHz dual core processor. Available editions AutoCAD

Architecture offers three editions, namely Architectural Drafting, Building Information Modeling and Collaboration for Architecture, which includes Building Information Modeling. The Architectural Drafting edition is for architects and engineers designing urban, institutional, educational, and general-purpose building designs. Building Information Modeling allows architects and engineers to perform complex and elaborate drafting tasks that require interoperability with other CAD applications and advanced functionality such as generating project documentation and issuing construction permits. The Building Information Modeling edition provides a more sophisticated, more precise building information modeling environment than the Architectural Drafting edition and the other entry-level AutoCAD Architecture products. The Collaboration for Architecture edition is for architects and engineers who wish to collaborate on projects with a group of users, in an enterprise environment with Autodesk infrastructure. Uses AutoCAD Architecture is used by architects, interior designers, engineers, and contractors for 2D and 3D visualization and design. A global design and construction company from Canada has developed an AutoCAD plugin to create a time-saving tool to aid the business. Enterprise Architecture for CAD The first version of AutoCAD Architecture was released in 1992 as a way for architects and engineers to collaborate on 3D building designs. The latest version of AutoCAD Architecture is
