## RemoteCommand Manager

Simple and User Friendly Remote Command Manager application is widely used by System Administrators and System Users for remote administration. It has two modes: Windows and Linux/Unix mode. The Windows mode supports saving profiles and command presets, whereas Linux/Unix mode does not support saving profiles or command presets. Main features of the application: 1. Several profiles and command presets are created for convenience. 2. The saved profiles can be selected to resume remote administration at any time. 3. Stored profiles can be downloaded and synchronized to other PCs. 4. It can be launched with the network login credentials, so it is suitable for unix, linux, and other OS based systems. 5. A command history is automatically kept when the remote command is issued. 6. It can show all the remote hosts on the local machine. 7. Provides the information about the logged in user and host on the remote machine. 8. Can also be used with other software applications, such as ssh, telnet, ftp, etc. 9. The remote host information is dynamically updated when the remote host changes. Remote KVM Client Remote KVM Client is a client program which is designed to use to remote control the KVM console and share control of KVM console remotely. It provides a convenient, intuitive, fast and easy-to-use interface for most users. The configuration files are the control files for the remote machine. With these configurations, you can enable the control on/off for KVM console, remote console, remote power on, remote power off, remote reboot, remote shutdown, remote suspend, remote suspend from system manager, remote reboot to system manager, and remote power off to system manager. Features: 1. Compatible with all Windows and Linux/Unix systems. 2. Simple configuration files, you can easily save and reload configurations. 3. Remote KVM Client runs in Windows and Linux/Unix mode automatically. 4. You can easily view the remote console from the local console. 5. You can add different users and remote IP addresses to the configuration. 6. The client supports dynamically update the remote host information when the remote host changes. 7. With the user interface of KVM Client, you can easily manage all the remote commands for the current session. 8. With the remote control feature of KVM Client, you can easily start or stop or reboot a remote server. 9. The configuration files can be synchronized between different 1d6a3396d6
